Partitioning Range: Esedra³

minimum structure, few vertical elements, ± 15 mm height regulation, simple installation and easy panel adjustment during or after installation.

Esedra³ is available in a wide range of panel modules – glazed, melamine, timber veneer, decor laminated, honeycomb core, sheet metal or aluminium profile – and the colours and finishes of the panels can be customised to match corporate design requirements. Moreover, since the various panels – solid, single or double glass – have been tested by authorised laboratories and shown to comply with

acoustic insulation norms, Esedra³ contributes a low-noise office environment.

Esedra³ partitioning is designed to be a highly sustainable product. Nearly all the materials used are recycled or recyclable and the product is environmentally friendly and easy to disassemble at the end of its lifecycle. A simple but functional concept, Esedra³ partitioning combines minimal design with maximum performance to create an eye-catching interior design feature.

Esedra³ redefines office design

Flexibility, adaptability and creativity in office design: if that's your goal, the Esedra³ partitioning range developed by Haworth Design Studio fits the bill. These demountable wall partitions give you maximum design freedom, enabling tailored solutions to be realised over and over again. Esedra³ partitioning is not only simple to assemble and just as easy to reconfigure, it also ensures excellent sound insulation and structural strength.

What sets the Esedra³ partitioning range apart is its horizontal track with three grooves into which any of the partition modules seamlessly fits. This track makes Esedra³ partitioning extremely flexible and easy to reconfigure, allowing spaces to be created and modified as required.

Esedra³ was evolved from the successful Esedra range, with which it shares features such as an alu-
